1. Write a program that draws a fixed circle, rectangle and triangle. Whenever a mouse is moved, display the message indicating whether the mouse point is inside the figure, as shown in figures below.

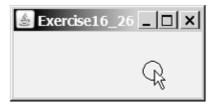

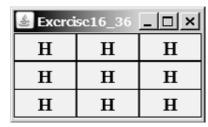

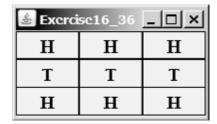

2. Write a program that displays a circle. You can point the mouse inside the circle and drag (i.e., move with mouse pressed) the circle wherever the mouse goes, as shown in Figure below.

3. Write a program that displays head (H) or tail (T) for each of nine coins, as shown in Figure below. When a cell is clicked, the coin is flipped. A cell is a **JLable**. Write a custom cell class that extends **JLable** with the mouse listener for handling the clicks. When the program starts, all cells initially display **H**.
